LEARNLY

ONLINE COURSES WEBSITE PROJECT REPORT

A learning platform webpage built with HTML5 and CSS3

Project	Learnly Online Courses Website
Technology	HTML5 and CSS3
Project Type	Front-end / Static Website
Purpose	Educational web development project

Prepared as a simple-English guide to the learning platform, its sections, design, and supplied HTML source code.

1. Introduction

Learnly is a sample online learning platform webpage that introduces visitors to online courses, learning categories, instructors, and a learner's progress. It displays popular courses in Design, Development, and Business. The webpage uses HTML to organise the content and an external CSS file to control its visual appearance and layout.

2. Project Objectives

• Create a clean homepage for an online learning platform.

• Display course categories such as Design, Development, Business, and Marketing.

• Present popular courses with descriptions, durations, and instructor details.

• Show course ratings, lesson counts, difficulty levels, and learning progress.

• Provide a section that highlights the learner's current progress.

• Introduce the instructors and their areas of expertise.

• Practise HTML page structure and external CSS styling.

3. Technologies Used

HTML5: Creates the structure of the website, including the navigation bar, hero section, course categories, course cards, learning progress section, instructor profiles, and footer.

CSS3: The HTML links to an external stylesheet named web3.css. This stylesheet is intended to control colours, typography, spacing, cards, buttons, progress bars, and responsive layout. The CSS file was not included in the supplied code.

4. Website Sections

Header and Navigation: Displays the Learnly logo, links to Courses, Instructors, and My learning, and a profile link for Alex Morgan.

Hero Section: Shows the message “Small steps. Big possibilities.” with a short introduction and an Explore courses button.

Browse Categories: Provides category links for All courses, Design, Development, Business, and Marketing.

Popular Courses: Displays three course cards: UI Design Essentials: From Idea to Interface; Modern Web Development with HTML & CSS; and The Creative Entrepreneur’s Playbook.

Course Details: Each course card includes a category, description, instructor, rating, lesson count, difficulty level, progress percentage, and action link.

My Learning Section: Highlights the learner's progress and states that 8 lessons have been completed during the week.

Meet Your Instructors: Introduces Sarah Chen, Jordan Miller, and Amara Patel, with their roles and course counts.

Footer: Displays the Learnly brand and the message “Learn at your own pace. Keep growing.”

5. Important Code Concepts

Semantic HTML elements: Elements such as header, nav, main, section, article, and footer organise the webpage into meaningful parts.

Anchor links: Links such as href="#courses" and href="#instructors" move visitors to the matching sections of the page.

Course cards: Article elements group the details of each course, making the information easier to read.

CSS classes: Class names such as course-card, thumbnail, avatar, and progress are hooks for styling through the external CSS file.

Progress indicators: Inline width values such as 65%, 30%, and 0% represent the displayed course progress.

Accessibility labels: The aria-label attributes provide descriptive labels for course thumbnail links.

6. Website Output Screenshot

The supplied screenshot shows the Learnly webpage, including its navigation, hero banner, category links, popular course cards, learner progress section, instructor profiles, and footer.

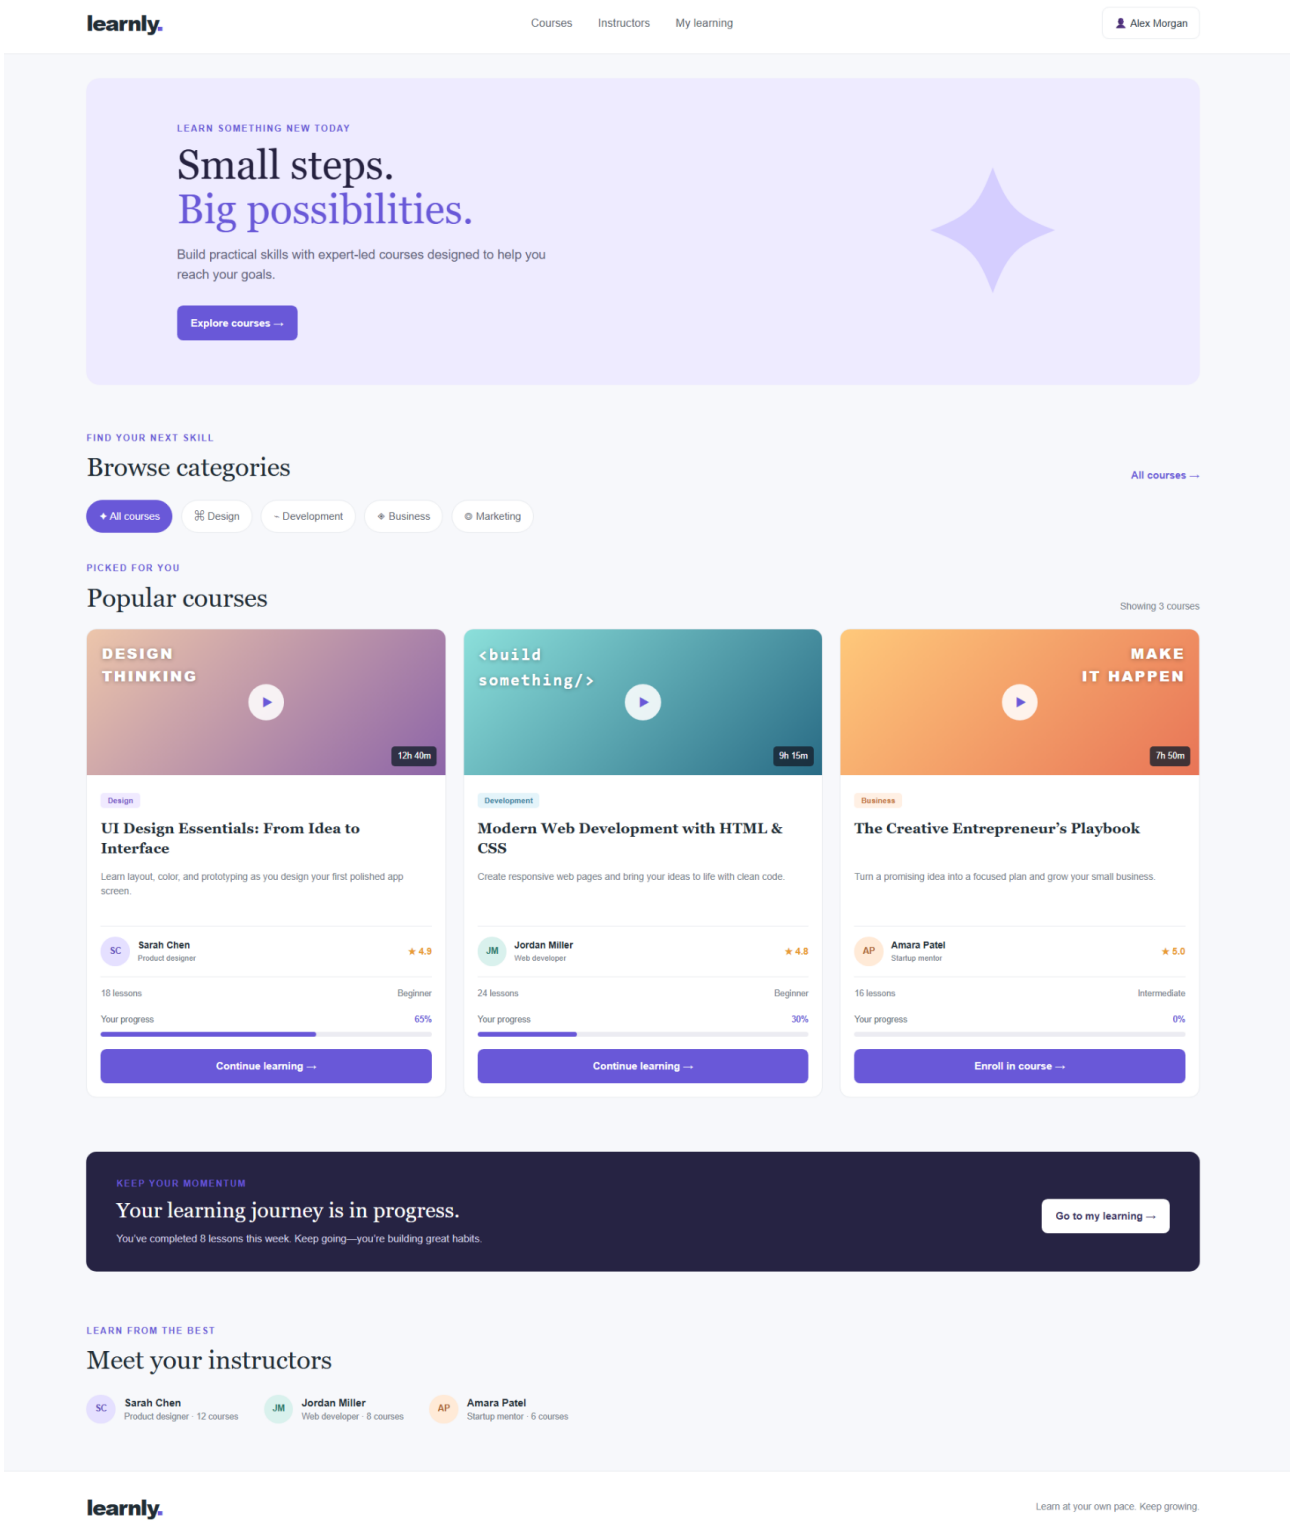

Figure 1. Learnly online courses website output (user-supplied screenshot).

7. How the Website Works

• The browser reads the HTML code and creates the webpage structure.

• The browser loads the linked web3.css file to apply the website's visual design.

• Navigation and category links use anchor IDs to move visitors to relevant sections.

• Course information is grouped into individual cards using article elements.

• The course progress bars display fixed sample percentages using inline styles.

8. Observations and Improvements

• The page contains sample learner and instructor names, ratings, course details, and progress values. Replace these with accurate details if the website is used for a real platform.

• The supplied HTML refers to web3.css, but that stylesheet was not provided. Add the CSS file to reproduce the full design shown in the screenshot.

• The course, category, and profile links mainly navigate to page sections or placeholder IDs. They do not connect to a complete course management system.

• A future version could include user login, course search and filtering, video lessons, payments, saved courses, and live progress tracking.

9. Conclusion

The Learnly website demonstrates how HTML5 can be used to create a structured online learning platform homepage. It includes course categories, popular courses, instructor information, learner progress, and navigation links. The project provides practice with semantic HTML elements, anchor links, article cards, accessibility labels, and external CSS. The supplied page is a front-end design; additional styling and functional features can be added in future development.

Appendix A. Supplied HTML Source Code

The complete HTML code supplied for the Learnly website is reproduced below. The linked web3.css stylesheet was not included in the supplied material.

```
