NORTHFIELD COLLEGE

WEB DEVELOPMENT PROJECT REPORT

A college information website built with HTML5 and CSS3

Project	Northfield College Website
Technology	HTML5 and CSS3
Project Type	Front-end / Static Website
Purpose	Educational web development project

Prepared as a simple-English guide to the website, its sections, design, and supplied HTML source code.

1. Introduction

Northfield College is a sample college website designed to provide visitors with information about the college, its departments, admissions, campus life, upcoming events, and contact details. The webpage uses HTML to organise the content and an external CSS file to control its appearance and layout.

2. Project Objectives

• Create a welcoming homepage for a college.

• Display important college information and statistics.

• Present departments and courses in separate cards.

• Provide information about the admissions process.

• Highlight campus facilities, faculty mentors, and student activities.

• Display upcoming college events.

• Provide contact information for visitors and applicants.

• Practise HTML page structure and CSS styling.

3. Technologies Used

HTML5: Creates the structure of the website, including the header, navigation links, hero section, statistics, content sections, cards, events, contact area, and footer.

CSS3: The HTML links to an external stylesheet named web2.css. This stylesheet is intended to control colours, fonts, spacing, section layouts, cards, buttons, and responsive behaviour. The CSS file was not included in the supplied code.

4. Website Sections

Header and Navigation: Displays the Northfield College brand, navigation links for About, Departments, Admissions, Campus, and Contact, and an Apply now link.

Hero Section: Introduces the college with the heading “Find your way forward”, a short message, and an Explore programs link.

Statistics Section: Displays a student–faculty ratio of 12:1, 38 fields of study, 80+ student clubs, and the founding year 1892.

About Section: Welcomes visitors and describes the college as a community where students learn through questions, teamwork, and practical activities.

Departments and Courses: Shows Arts & Humanities, Science & Technology, and Business & Economics, each with a short description and a View courses link.

Admissions Section: Explains the application process and provides an email link to ask about applying.

Campus Section: Highlights campus facilities, faculty mentors, and events and community activities.

Upcoming Events: Lists Open House on 08 Nov, Student Research Night on 14 Nov, and College Music Evening on 21 Nov.

Contact Section and Footer: Displays the college address, phone number, admissions email, contact link, and copyright text.

5. Important Code Concepts

Semantic HTML elements: Elements such as header, nav, main, section, article, and footer organise the webpage into meaningful parts.

Anchor links: Links such as href="#about" move visitors to the section with the matching ID.

Cards: Article elements group related department and campus information.

Email links: The mailto: link opens the visitor's email application with the admissions address.

External CSS: The link element loads the web2.css file to style the HTML page.

6. Website Output Screenshot

The supplied screenshot shows the Northfield College webpage, including the navigation bar, hero banner, statistics, college introduction, departments, admissions, campus information, events, and contact section.

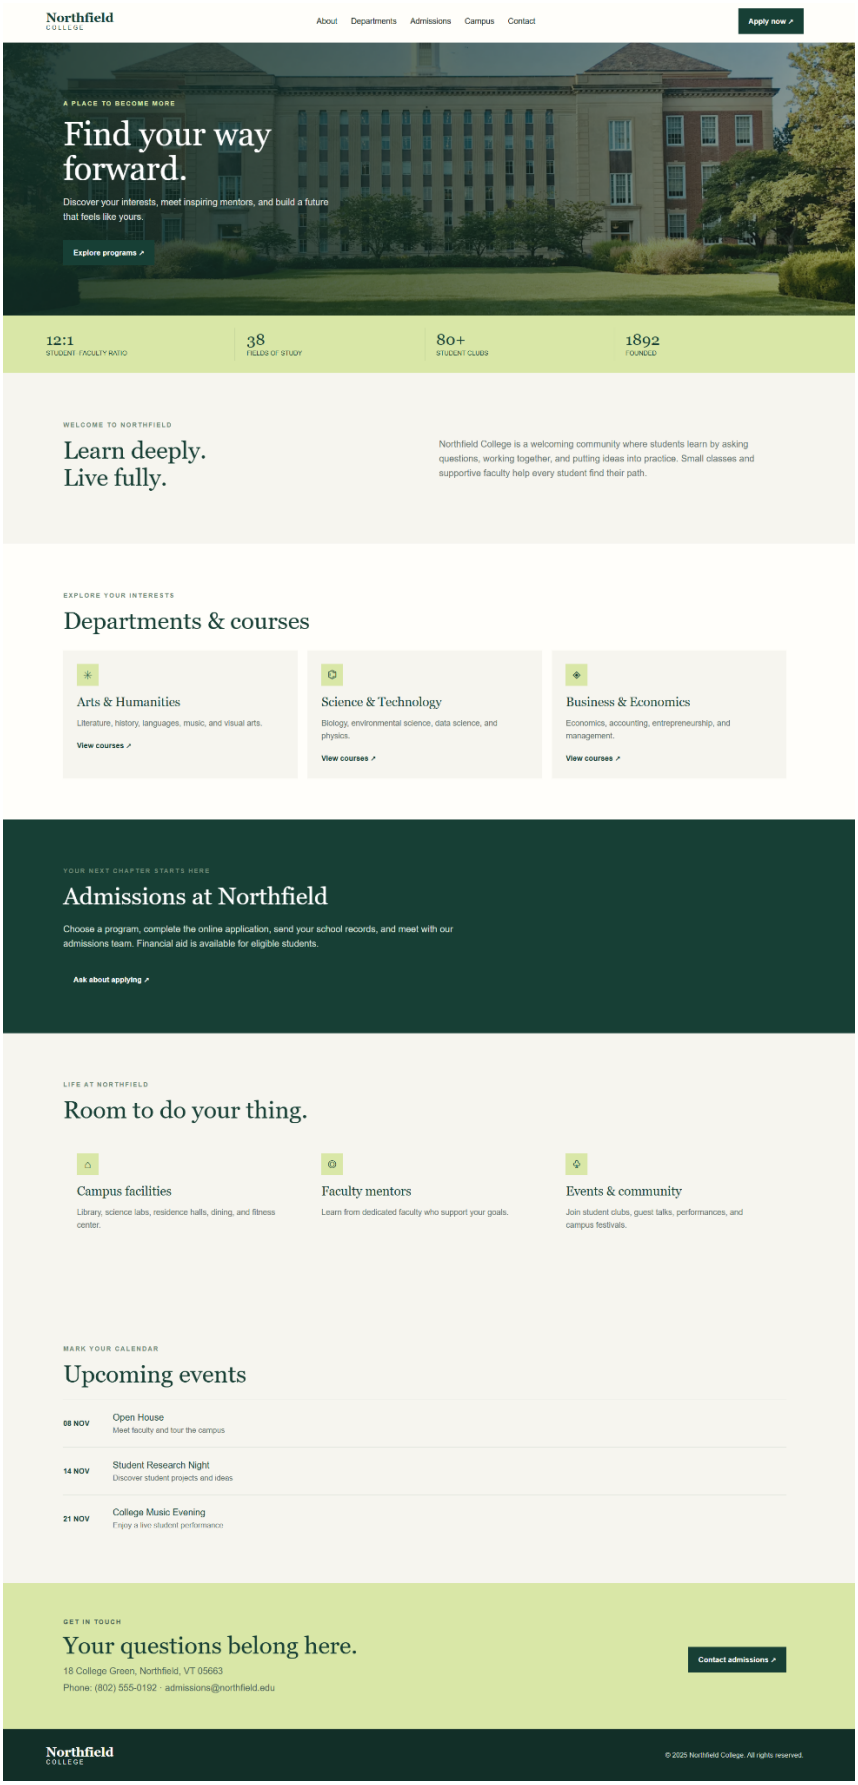

Figure 1. Northfield College website output (user-supplied screenshot).

7. How the Website Works

• The browser reads the HTML code and builds the webpage structure.

• The browser loads the linked web2.css file to apply the website design.

• The navigation links use section IDs to move visitors to the selected part of the page.

• Department and campus information is organised using article cards.

• The admissions and contact email links use mailto: to open an email application.

8. Observations and Improvements

• The website uses sample college details such as the address, phone number, statistics, dates, and email. Verify or replace them before using the website publicly.

• The supplied HTML refers to web2.css, but that stylesheet was not provided. Add the CSS file to reproduce the complete visual design shown in the screenshot.

• The Apply now, Explore programs, View courses, and Contact admissions links navigate to sections or open an email. They do not provide a complete online application system.

• The events are sample entries and should be updated with confirmed dates and details.

• A future version could include an online application form, course details pages, and a working event registration feature.

9. Conclusion

The Northfield College website demonstrates how HTML5 can be used to create a structured college information webpage. It includes college details, departments, admissions information, campus facilities, events, and contact information. The project provides practice with semantic HTML elements, navigation links, sections, cards, and external CSS. The supplied page is a front-end design; additional styling and functional features can be added in future development.

Appendix A. Supplied HTML Source Code

The complete HTML code supplied for the Northfield College website is reproduced below. The linked web2.css stylesheet was not included in the supplied material.

```
<!doctype html>
<html lang="en">
